End **rodenticide use** in Deschutes County–

Protect people, pets, and wildlife

Rodenticides don't just affect rats and mice— they poison the entire food chain.

Rodents that come into contact with rodenticide boxes used around housing complexes die by ingesting the poison, and are then eaten by the birds that are subsequently attracted to the area. Those birds die, attracting other scavenging wildlife and curious cats and dogs, as no bait station is 100% effective in keeping them from making contact with the rodenticide within. The use of rodenticide in our communities has resulted in reports by Deschutes County residents of dead birds of prey, including **Great Horned owls**, **Cooper's hawks**, and **Sharp-shinned hawks**.

By signing this petition, you are pledging your support to ***ban use of rodenticides in Deschutes County*** to protect and conserve wildlife, and keep your community safe.
